Art Unit: 2876

10. ☑ Other: <u>See Continuation Sheet</u>

Continuation of 5. does NOT place the application in condition for allowance because:

Claims10-11 (i.e.,re-resented former claim 7, which were objected as being dependent upon rejected base claim but would be allowable if rewritten in independent form in previous O.A. paper no. 11, as new independent claim 10) are now allowable.

With respect to the rejected claims 6 and 9, the examiner believes that Gloton still meets the limitations as broadly set forth in the claims the following reason(s): Claim 6 recites a conductive track forming an antenna having a plurality of perforation receving portions and an insulating layer that disposing a conductiver track and the insulating layer is recevided by a plurality of perforations receving portion of the the conductive track.

Gloton teaches the applicant's recited limitations, i.e., a conductive track forming an antenna having a plurality of perforation receving portions and an insulating layer that disposing a conductiver track and the insulating layer is recevided by a plurality of perforations receving portion of the the conductive track (see the Final Rejection, paper no. 11). Since applicant has not defined in the claims that the insulating layer is a non-metal strip, Gloton meets the claim limitations.

Continuation of 10. Other: Claims 6 and 9 remain rejected as set forth in the Final Office Action (see paper no. 11).
